

Software Developer · Frontend & Mobile · AI Systems

Self-taught Software Developer with a proven track record of shipping production-grade applications. Specialises in React, TypeScript, and Capacitor for cross-platform mobile and web experiences. Actively engaged in AI systems research, with hands-on work designing novel self-adapting architectures. Comfortable operating across the full stack and building tools that solve real problems in low-resource environments.

Live · macroaudit.xalosoftware.com

- Designed and shipped a full trading journal app enabling traders to log trades, review performance analytics and build execution consistency.
- Built end-to-end: UI/UX design, frontend architecture, backend integration and deployment.
- Handles real user data with a privacy-conscious data model and clean analytics dashboard.

Active · Open Source

- Built a CLI utility that abstracts the entire Capacitor build and sync workflow into simple, memorable commands.
- Eliminates the need to memorise platform-specific flags and command sequences for iOS, Android and web targets.
- Designed with developer ergonomics as the primary goal — reducing friction in the mobile build loop.
